

JAN MIKO A. GUEVARRA

Software Engineer | Full-Stack, SaaS Platforms & Integrations

Digos City, Philippines | +63 951 457 5745 | janmikoguevarra@gmail.com

[Portfolio](#) | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Software engineer with 4+ years of freelance experience and hands-on ownership of production SaaS platforms. Builds and maintains full-stack web, mobile, API, and database workflows with Next.js, React, TypeScript, Flutter, Cloudflare Workers, PostgreSQL/Supabase, and Firebase. Experienced in existing codebases, real-time systems, role-based access, payment and third-party integrations, debugging, testing, and deployment. Proactive and reliable, with strong attention to detail, rapid learning, and clear stakeholder communication.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Dart, Python, SQL, Java, Kotlin

Full-Stack: Next.js 14-16, React 18-19, Node.js, REST APIs, webhooks, Tailwind CSS, Flutter

Databases & Backend: PostgreSQL, Supabase (Auth, Realtime, Storage, RLS), Firebase, Firestore, SQLite, Cloudflare D1, Neon

Cloud & Integrations: Vercel, Cloudflare Workers/R2, Stripe, PayMongo, Better Auth, Gemini/OpenAI APIs, Twilio, email, maps, QR and PDF workflows

Engineering Tools: Git, GitHub, Vitest, Flutter Test, Docker, Postman, pnpm/npm, ESLint, TypeScript strict mode, Zod, VS Code, Android Studio

PROFESSIONAL EXPERIENCE

Full-Stack Software Developer Intern | JohnV MEDIA

July 2026 - August 2026

- Served as primary developer for PicklePark and PesoJar during a 162-hour practicum, delivering mobile, web, backend, database, payment, and operations features from implementation through testing and deployment support.
- Built and improved PicklePark booking, Open Play queue and court workflows, live facility monitoring, player operations, credits, payments, POS/inventory, administration, and reporting using Next.js, TypeScript, Supabase/PostgreSQL, Realtime, and PayMongo.
- Implemented PesoJar local-first Flutter workflows, synchronization, authentication, Stripe subscriptions, Cloudflare Worker/D1/R2 services, protected web administration, automated checks, and release verification.

Freelance Full-Stack Software Engineer | Self-Employed

June 2022 - Present

- Own end-to-end delivery of client web and mobile systems: clarify requirements, model data, implement user-facing and administrative workflows, integrate APIs, diagnose defects, deploy releases, and provide post-delivery support.
- Build maintainable TypeScript/React and Flutter applications backed by PostgreSQL/Supabase or Firebase, using authentication, row-level access controls, real-time updates, validation, reporting, and reusable component patterns.
- Translate operational requirements into modular data models, role-based workflows, administrative dashboards, and responsive interfaces for business, government, healthcare, and education use cases.
- Deliver API and integration work spanning SMS and email notifications, maps, PDF/Excel generation, QR workflows, file uploads, OCR, and AI model serving.
- Apply strong problem-solving and debugging skills across client, server, database, and third-party boundaries; write clean, scalable, and maintainable code and independently own features from requirements through delivery.

SELECTED PROJECTS

PicklePark | Live Sports & Facility Operations Platform

Jun 2026 - Aug 2026

- Developed production workflows for court booking, Open Play queues and assignments, Court Pulse monitoring, tournaments, credits and payments, POS/inventory, player operations, administration, and reporting on a Next.js/Supabase platform.

PesoJar V2 | Personal Finance SaaS

2026

- Built local-first Flutter finance experiences and a protected Next.js admin backed by Cloudflare Workers, D1, R2, and Better Auth; implemented synchronization, Stripe subscription billing, account access, testing, and release workflows.

NomoQR | Multi-Tenant Restaurant SaaS

2026

- Developed QR-based guest ordering and a real-time staff dashboard for order, kitchen, service, billing, receipt, inventory, menu, table, staff, and browser-printer workflows using Next.js 16, TypeScript, Supabase, PostgreSQL functions, and RLS.

HealthCardGo | Client Healthcare SaaS-Style Platform

2025 - 2026

- Developed a Next.js 16, React 19, TypeScript, Supabase, TanStack Query, Chart.js, and Leaflet system with staged appointments, real-time notifications, role-based dashboards, geographic surveillance, and SARIMA forecasting.

JobSync | Municipal Government Platform

2026

- Built a multi-role Next.js/Supabase application that ranks applicants with an AI ensemble, manages structured personal data, coordinates training enrollment, and generates certificates and reports.

MCI Detection System | Freelance Medical AI Application

Jan 2026 - Jun 2026

- Developed a full-stack web and Python/FastAPI workflow for MRI-based MCI screening, patient and role management, NIfTI processing, analytics, and PDF reports; the evaluated Gradient Boosting pipeline reached 80.77% accuracy on 1,213 scans.

EDUCATION

Bachelor of Science in Computer Science | Cor Jesu College, Digos City

Expected 2027

Relevant study: data structures and algorithms, database management systems, software engineering, web and mobile development, human-computer interaction, and artificial intelligence.

CERTIFICATIONS & TRAINING

- Programiz Java Programming Course - 2023
- Programiz Application Development Course - 2023
- Teaching English as a Foreign Language (TEFL) - 2024
