PROFESSIONAL SUMMARY

Full-stack software developer building web and mobile applications since 2022, including client systems, an independent live product, and production work at JohnV MEDIA. Works across React/Next.js, Flutter, APIs, PostgreSQL/Supabase, payments, and AI integrations. Delivers features from requirements and data modeling through testing, deployment, and support.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Dart, Python, SQL, Java, Kotlin

Full-Stack: Next.js 14-16, React 18-19, Node.js, REST APIs, webhooks, Tailwind CSS, Flutter

Databases & Backend: PostgreSQL, Supabase (Auth, Realtime, Storage, RLS), Firebase, Firestore, SQLite, Cloudflare D1, Neon

Cloud & Integrations: Vercel, Cloudflare Workers/R2, Stripe, PayMongo, Better Auth, Gemini/OpenAI APIs, Twilio, email, maps, QR and PDF workflows

AI & ML: Gemini/OpenAI APIs, MediaPipe, OCR, Python/FastAPI, scikit-learn, PyTorch, model evaluation

Engineering Tools: Git, GitHub, Vitest, Flutter Test, Docker, Postman, pnpm/npm, ESLint, TypeScript strict mode, Zod, VS Code, Android Studio

PROFESSIONAL EXPERIENCE

Full-Stack Software Developer Intern | JohnV MEDIA

July 2026 - August 2026

- Served as primary developer for PicklePark and PesoJar during a 162-hour practicum, delivering web, mobile, backend, database, and payment features with testing and release support.
- Built and improved PicklePark booking, Open Play queue and court workflows, live facility monitoring, player operations, credits, payments, POS/inventory, administration, and reporting using Next.js, TypeScript, Supabase/PostgreSQL, Realtime, and PayMongo.
- Implemented PesoJar local-first Flutter workflows, synchronization, authentication, Stripe subscriptions, Cloudflare Worker/D1/R2 services, protected web administration, automated checks, and release verification.

Independent Full-Stack Developer | Client & Product Work

June 2022 - Present

- Build client and independent web/mobile systems: clarify requirements, model data, implement user-facing and administrative workflows, integrate APIs, diagnose defects, and support releases.
- Build maintainable TypeScript/React and Flutter applications backed by PostgreSQL/Supabase or Firebase, using authentication, row-level access controls, real-time updates, validation, reporting, and reusable component patterns.
- Translate operational requirements into modular data models, role-based workflows, administrative dashboards, and responsive interfaces for business, government, healthcare, and education use cases.
- Deliver API and integration work spanning SMS and email notifications, maps, PDF/Excel generation, QR workflows, file uploads, OCR, and AI model serving.
- Debug issues across client, server, database, and third-party boundaries; document fixes, verify behavior, and communicate delivery status with clients and teams.

SELECTED PROJECTS

PicklePark | Live Sports & Facility Operations Platform

Jun 2026 - Aug 2026

- As primary developer at JohnV MEDIA, built live court-booking, Open Play, credit and payment, facility-monitoring, and admin workflows on a Next.js/Supabase platform. Live product: pickleparkph.com.

PesoJar V2 | Personal Finance SaaS

2026

- Built local-first Flutter finance experiences and a protected Next.js admin backed by Cloudflare Workers, D1, R2, and Better Auth; implemented synchronization, Stripe subscription billing, account access, testing, and release workflows.

NameAsOne | Independent Identity Platform

2026

- Built and launched nameasone.cc with custom handles, public profiles, grouped contact/link actions, and a profile editor. Used Next.js, TypeScript, Supabase, and row-level access controls; payment actions show owner-provided details rather than processing transfers.

NomoQR | Multi-Tenant Restaurant SaaS

2026

- Developing QR guest ordering and a real-time staff dashboard for kitchen handoff, billing, receipts, menus, tables, and staff operations using Next.js, TypeScript, Supabase, PostgreSQL functions, and RLS.

InCloud | Client Inventory Web + Mobile System

2025 - 2026

- Built a Next.js admin and Flutter customer app for a frozen-food distributor, covering tiered pricing, inventory, orders, Excel import/export, proof-of-payment uploads, and Gemini-assisted analytics.

HealthCardGo | Client Healthcare SaaS-Style Platform

2025 - 2026

- Developed a Next.js 16, React 19, TypeScript, Supabase, TanStack Query, Chart.js, and Leaflet system with staged appointments, real-time notifications, role-based dashboards, geographic surveillance, and SARIMA forecasting.

JobSync | Municipal Government Platform

2026

- Built a multi-role Next.js/Supabase platform for a municipal client, including AI-assisted applicant ranking, structured applicant records, training enrollment, certificates, and reports.

MCI Detection System | Freelance Medical AI Application

Jan 2026 - Jun 2026

- Developed a research workflow with a web app and Python/FastAPI backend for MRI-based MCI analysis, NIfTI processing, role-based records, analytics, and PDF reports. A Gradient Boosting model reached 80.77% accuracy on a held-out set of 182 samples.

EDUCATION**Bachelor of Science in Computer Science | Cor Jesu College, Digos City****Expected 2027**

Relevant study: data structures and algorithms, database management systems, software engineering, web and mobile development, human-computer interaction, and artificial intelligence.
