

JAN MIKO A. GUEVARRA

Full-Stack Software Developer | Web, Mobile & AI Integrations

Digos City, Philippines | +63 951 457 5745 | janmikoguevarra@gmail.com

[Portfolio](#) | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Full-stack developer building web and mobile products with React, Next.js, Flutter, and PostgreSQL/Supabase. Delivered client and personal projects across booking, inventory, finance, and identity platforms; integrates APIs, payments, and AI services into application workflows.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Dart, Python, SQL

Full-Stack: React, Next.js, Node.js, REST APIs, webhooks, Tailwind CSS, Flutter

Databases & Backend: PostgreSQL, Supabase (Auth, Realtime, Storage, RLS), Firebase, SQLite, Cloudflare D1

Cloud & Integrations: Vercel, Cloudflare Workers/R2, Stripe, PayMongo, Xendit, HighLevel API, OAuth

AI & Application Features: OpenAI/Gemini APIs, Python/FastAPI, OCR, model inference, QR and PDF workflows

Engineering Tools: Git, GitHub, Vitest, Flutter Test, Postman, npm/pnpm, ESLint, VS Code, Android Studio

PROFESSIONAL EXPERIENCE

Full-Stack Software Developer Intern | JohnV MEDIA

Jul 2026 - Aug 2026

- Served as sole full-stack developer for PicklePark and PesoJar during a supervised practicum, owning frontend, backend, database, and integration work.
- Implemented customer-facing workflows and administrative controls for court operations and personal finance; supported debugging and release checks.

Independent Development | Personal & Client Projects

2024 - Present

- Built client systems for inventory, appointments, applicant management, and reporting, alongside the independent NameAsOne identity platform.
- Integrated authentication, protected records, real-time updates, REST APIs, and AI services across web/mobile workflows.
- Diagnosed client, server, database, and provider issues; documented changes and verified behavior with local checks.

SELECTED PROJECTS

PicklePark | Sports & Facility Operations

Built booking, Open Play, payment, and facility-administration workflows using Next.js and Supabase/PostgreSQL. Connected customer actions to staff controls and reporting as the sole full-stack developer. Public site: pickleparkph.com.

PesoJar | Personal Finance App

Built a local-first Flutter finance app: SQLite keeps signed-in users' data available offline, while authenticated Cloudflare Worker APIs synchronize with D1 when connectivity returns. Implemented account access, Stripe integration, and protected administration. Public site: pesojar.com.

NameAsOne | Independent Identity Platform

Built a Next.js/TypeScript identity platform with Supabase-backed profiles, custom handles, and an owner editor for grouped links and contact actions. Public payment actions show owner-provided details. Public site: nameasone.cc.

NomoQR | Restaurant Ordering & Operations

Developing account-free table QR ordering and real-time staff operations with Next.js and Supabase. Implemented backend order/price validation through PostgreSQL functions; collaborated with a frontend contributor. Public site: nomoqr.com.

InCloud | Inventory Web & Mobile System

Built the full-stack inventory and ordering system independently: Next.js staff administration and a Flutter customer app connected to backend stock/order workflows. Owned frontend, backend, and application integration.

HealthCardGo | Healthcare Appointment Platform

Built Next.js/Supabase appointment workflows with role-based access, real-time notifications, geographic surveillance views, and reporting for staff operations.

JobSync | Applicant Management Platform

Built a multi-role Next.js/Supabase applicant platform connecting records, AI-assisted ranking, training enrollment, certificates, and reporting for administrative workflows.

MCI Detection System | Research Application

Built the web interface and Python/FastAPI backend for a research workflow combining MRI/NIfTI processing, model inference, role-based records, and PDF reports. Research application; no clinical-validation claim.

Pay247 | HighLevel & Xendit Integration

Implemented OAuth setup, checkout mapping, and native Xendit webhook processing. Resolved concurrent callback handling; documented sandbox checkout reached HighLevel Paid through original provider deliveries. Test-mode pilot. Public preview: pay247.vercel.app.

EDUCATION

BS Computer Science | Cor Jesu College, Inc., Digos City
Fourth-year Computer Science student.

Expected 2027
